

Bookmark SEED PAPER SOURCE

The bookmark PDF was designed to be printed specifically on the seed paper from the ***Of the Earth*** company. You can plant this paper and flowers will grow from it.

This is not something everyone will want to do and it isn't one of the least expensive things I've ever done, but it is really nice if you have the time and money to do it.

I used my home inkjet when I did these so I could baby it a bit more--but it printed quite nicely.

Here is the contact information on where to get this paper:

www.flowerseedpaper.com is the primary URL.

The specific URL page is:

http://www.flowerseedpaper.com/seeds/flowerseed_lotka_computer_paper.html

I used the Lotka Seeded Computer Paper. It looks like parchment and really prints up well in an ink-jet printer. It costs \$11.49 per package of 25 pages and you can print 4 bookmarks per page.

For shipping it is 9.64 if you purchase 1-4 packages (shipping is always like that, the first one costs the most and then you can add others for only a little bit more).

Even if you don't use this for Mother's Day, do check out the website for some fun ideas for creations for other Ladies Events.
